

energydesign-asia Ingenieurgesellschaft mbH

is a partner in the technology and innovation group of Prof. Dr. M. N. Fisch, a network of five independent, but closely connected, institutions dealing with research, planning and consulting in the area of energy-efficient and sustainable building design and solar energy applications. Sixty architects, engineers, scientists and researchers in Stuttgart, Braunschweig, Shanghai and Dubai are working on all aspects of conception, design and operation of buildings, sites and neighborhoods.

Currently we are recruiting for a position in our energydesign group for concept and design in our head office in **Stuttgart, Germany** for projects in China and the Middle East. We are looking for excellent engineers and qualified architects.

Diplom-Ingenieur (Versorgungstechnik) Master of Engineering (Building Services) Master of Architecture (with energydesign qualification)

The task will include:

- contribution to innovative buildings projects
- development of energy concepts for new and existing buildings
- application of building simulation and other specialized building evaluation techniques
- development of energy concepts with advanced building services systems
- development of energy concepts with low-energy and low-emission targets

Successful applicants can demonstrate:

- qualification from a well-known school or university
- relevant competence and skills; professional experience is appreciated
- knowledge of building simulation, daylight simulation and/or CFD techniques
- knowledge of building physics and building science
- interest in low-energy techniques, advanced systems and renewable energy applications
- interest and experience in Asia and Middle East, willingness to travel
- good command of spoken and written English; Chinese or Arab skills appreciated
